

# HANGING ROD CANOPIES

## DURABLE • MODERN • VERSATILE

Hanging rod canopies are an excellent choice for both their practical and aesthetic qualities. These canopies are engineered to handle snow loads, rain, wind and sun.

In addition to protecting people and sidewalks from the elements, hanging rod canopies also help to reduce heating and cooling costs inside the building.

Both the canopy and its components are constructed with high-quality parts that are all aluminum, providing a rust-free, low-maintenance solution that will last.

With numerous commercial applications, a hanging rod canopy may be just what you need over an entryway, drive-thru, loading dock or window. Canopies can be customized in a variety of ways to fit most applications and best compliment the design of your building.
